

Strategic Business Process Model — ProBuild AS-IS

File: `src/main/resources/strategic/strategic_asis.bpmn` (+ `.png`)

This is the **AS-IS** (current-state) strategic model of how ProBuild operates *before* automation. It is intentionally modelled at the business level with **manual/human tasks** and cross-pool hand-offs that are, in reality, **phone calls and faxes** — capturing the pain the project sets out to remove (BPMN 2.0; OMG, 2013).

The five actors and the manual hand-offs

Pool	Current manual work	Hand-off to the next actor
Customer	Enquire → receive a <i>verbal</i> quote → pay / apply for finance → collect goods	enquiry is made <i>in store or by phone</i>
ProBuild (counter & back office)	Take enquiry → phone the warehouse → write the quote by hand → fax the finance application → chase FinTrust by phone → reconcile loyalty points in a spreadsheet → release goods → book FixPro when tools pile up	verbal quote to customer; fax to FinTrust; phone to warehouse & FixPro

Pool	Current manual work	Hand-off to the next actor
Warehouse	Walk the aisles to check stock → report the level by phone	phone the level back to the counter
FinTrust UK	Receive the faxed application → assess by hand → fax / phone the decision back	fax / phone decision to ProBuild
FixPro Ltd	Make a weekly site visit → service whatever tools are left in the bay	—

Why this is the problem the automation solves

Every hand-off in the AS-IS model is a **manual, point-to-point communication** with no shared view of state — the exact issues named in the brief:

AS-IS pain (strategic model)	TO-BE resolution (operational model)
Stock checked by phoning the warehouse	<code>sales-check-inventory</code> reads live <code>INVENTORY</code>
Quotes written by hand, ad hoc	<code>Cap_Sales</code> prices from the same live data
Finance faxed and chased by phone	<code>finance.requested</code> / <code>finance.settled</code> messages to the <code>Partner_FinTrust</code> pool
Loyalty reconciled in a spreadsheet after the fact	<code>Cap_Loyalty</code> + <code>loyalty_band</code> DMN, in-line
Tools wait in the bay until someone books FixPro	<code>service.requested</code> message auto-starts <code>Partner_FixPro</code>
No shared view of any order/hire/application	one <code>journeyId</code> correlates every pool end-to-end

The strategic model therefore establishes the requirement each element of the operational model fulfils — the through-line from *problem* to *automated solution*.
